

TESTIMONIAL

Enzo
30 years old

"For years I have admired and been slightly envious of people with straight teeth! During the treatment I never forgot to wear my invisible aligner and the results was perfect"

Nathalie
34 years old

"When I was I child I wore a removable orthodontic appliance but when I grow up my teeth became crowded. I wanted straight teeth but metal braces were never really an option: when I discover the invisible aligner I immediately realized that it was the ideal solution"

Claudia
40 years old

"When I looked in the mirror, I always had the feeling that something was not aesthetic: I wanted to improve my smile and facial beauty and my dentist suggested invisible aligners. Now I feel much more confident and attractive!"

**THE INVISIBLE ORTHODONTIC
TREATMENT FOR EVERYBODY**

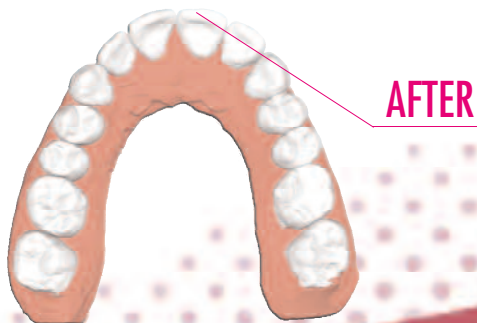

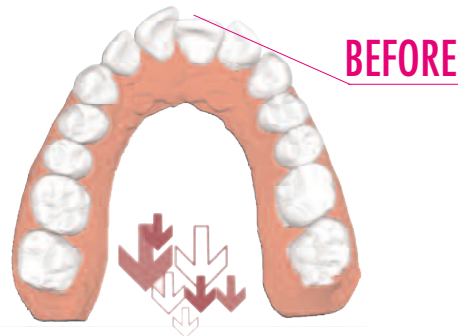

MISALIGNED TEETH?

Besides aesthetics, misaligned teeth can be responsible of occlusion problems and consequently involve posture and articulation.

DON'T STOP SMILING

Invisible aligners are easy to use, over a million patient have been successfully treated by this innovative technology. The treatment consists of a series of removable, comfortable aligners, made of transparent materials and thus virtually invisible. When you begin treatment, the orthodontist will give you the information about the numbers of aligners you will need and how long it will take to finish your treatment, usually from 8 to 18 months.

At the end of the treatment everybody will admire your smile!

THE SOLUTION

The main advantages of invisible aligner compared to the traditional treatment:

- COMPLETELY CLEAR, VIRTUALLY INVISIBLE
- REMOVABLE, ALLOWS TO MAINTAIN GOOD ORAL HYGIENE
- EASY TO USE
- MINIMUM CHECKUPS REQUIRED
- COMFORTABLE WEARING, NO GUM IRRITATION

EASY TO WEAR

HOW IT WORKS

Treatment phases:

- 1 The patient books a consultation with a certified orthodontist
- 2 The orthodontist evaluates if the invisible aligners are suitable for the treatment
- 3 In case of a positive response, the orthodontist takes the teeth impressions and bite and send them together with pictures and x-ray to the aligner manufacturer.
- 4 A 3D animation Check-line is presented to the patient showing the teeth movement till the final results
- 5 The aligners are produced and the patient can start the treatment. In case of a complete full arch treatment, only the first set of aligners (half of the treatment) will be sent
- 6 Each aligner is numbered and must be worn for about two weeks, during which teeth will move little by little
- 7 Aligners must be worn all day long and except for eating and tooth brushing
